

SOPWELL NUNNERY GREENSPACE ACTION PLAN 2024 – 2029

OVERVIEW

Greenspace Action Plans

Greenspace Actions Plans (GAPs) are map-based management plans which specify activities that should take place on a site over a stated period of time; these activities will help to deliver the agreed aspirations which the site managers and stakeholders have identified for that site.

Public Engagement

Engagement with stakeholders is at the centre of effective management planning on any site. An initial engagement period was held Sopwell Nunnery Greenspace and Sopwell Mill Open Space in November and December 2022, to establish core aims and objectives for the site; these are reflected in Section 3. A second stage of engagement to be completed in November 2023 will enable stakeholders to comment on the proposed management actions for the site. An associated engagement response document, published online as an appendix to this plan, summarises comments received and any amendments made to the plan as a result.

1.0 SUMMARY

1.1 Site Summary

Site Name:	Sopwell Nunnery Green Space and Sopwell Mill Open Space
Site Address:	Cottonmill Lane St Albans Hertfordshire AL1 1HH
Grid Reference:	TL 515099 206378
Size:	6.4ha (Sopwell Nunnery 5.5ha & Sopwell Mill Open Space 0.9ha)
Designations:	Scheduled Monument Metropolitan Green Belt Environment Agency – Flood Zone 3
Owner:	St Albans City and District Council

1.2 Vision Statement

Sopwell Nunnery Green Space provides an uplifting experience for any visitor whether exploring the ruins; discovering wildlife on the river; exercising the dog or following the site's thousand year old gardening tradition on the allotment. The Green Space allows you to make connections: it links you to the wider countryside and town via the Alban Way and the Ver Valley Trail; connects you to the city's medieval and Tudor heritage; to the productivity of the soil; to other people and to nature. It's a valuable resource for the people of St. Albans.

The vision for management of Sopwell Nunnery Green Space will be to create:

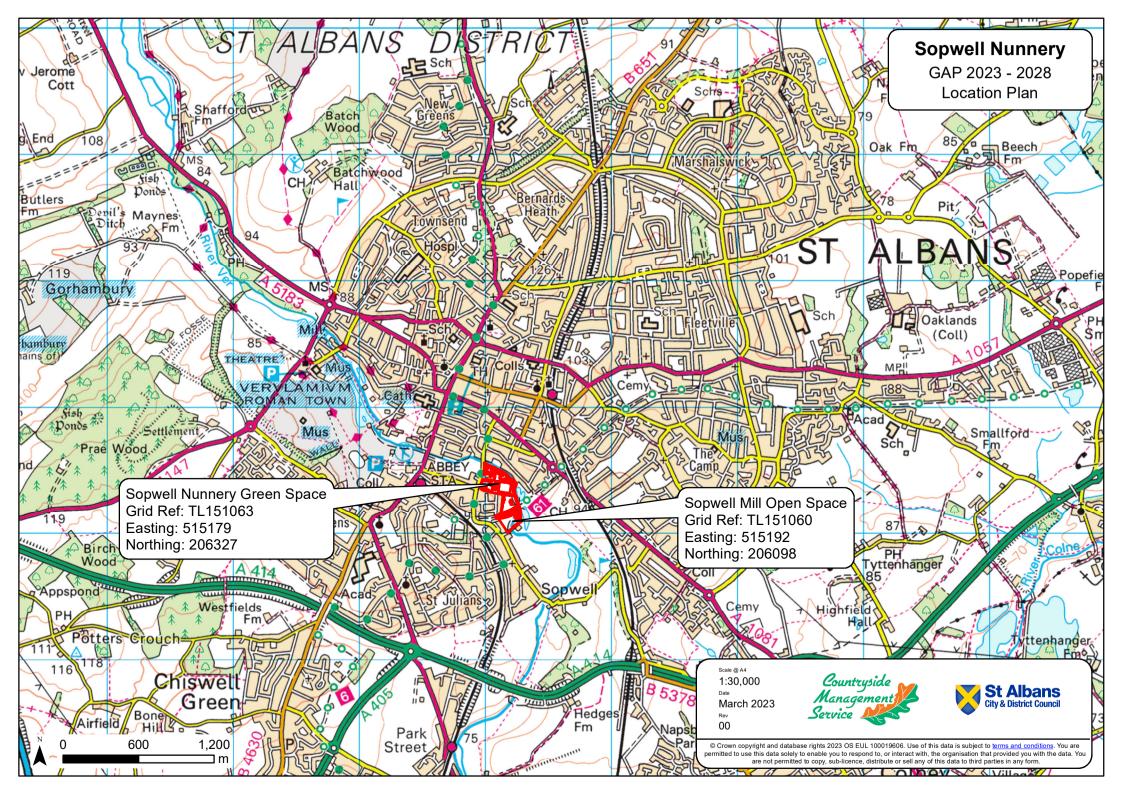

- a welcoming and accessible Green Space for the local community and for visitors from further afield
- a site whose historic significance is interpreted, celebrated and respected
- a place that supports and celebrates self-sufficiency and the production of food
- a site rich in biodiversity connected to neighbouring habitats by a characteristic chalk river.

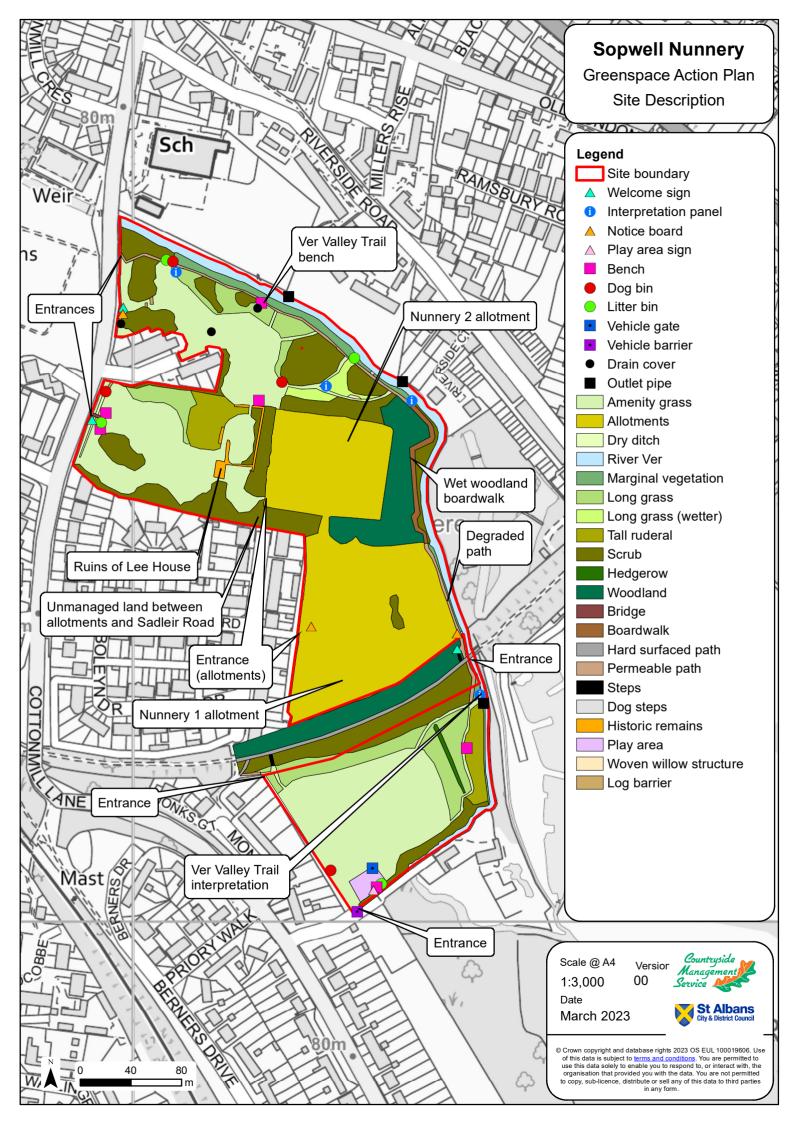

2.0 SITE DESCRIPTION

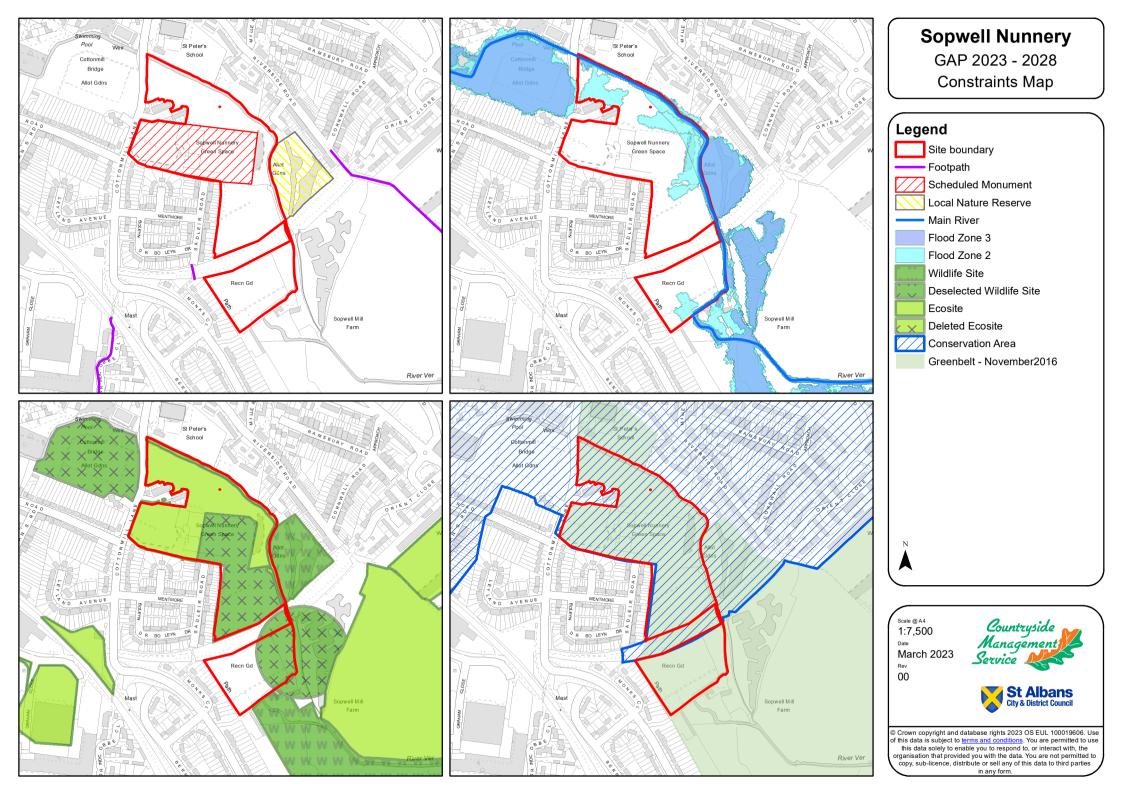

2.1 Introduction

Sopwell Nunnery Green Space is a 5.5 hectare public open space situated in the Sopwell Ward to the south of St. Albans. The busy city centre is only a ten minute walk away. It is bordered by the Alban Way to the south, Cottonmill Lane and Sadleir Road to the west, and the River Ver on the other two sides. The green space, including the associated Nunnery Allotments, is located on a Scheduled Monument: the site of the 12th century Nunnery of St Mary and the 16th century remains of Lee Hall.

Sopwell Mill Open Space is 0.9 hectares situated to the south of the Nunnery site, separated by the railway embankment that now accommodates the Alban Way, but connected to the Nunnery green space by the Ver Valley Trail.

2.2 Geography and Landscape

2.2.1 Landscape

The site is located on the flood plain of the River Ver. The geology comprises river alluvium covered in stone-less clayey and poorly drained soils, some of which are calcareous. The River Ver chalk river winds its way through the wide valley. Mature willows, some of which have been pollarded, follow the course of the river. The meadows and scattered clumps of scrub add interest to the area of amenity grass.

The ruins of the Tudor Hall have scenic as well as historic interest with the brick walls, window spaces and arches representing the remnants of Richard Lee's Tudor Hall, which was built upon the twelfth century nunnery site.

Although the Sopwell neighbourhood has its share of dense residential developments, there is also a considerable amount of green open space. Sopwell Nunnery Green Space has an important function as an informal recreational area for children, families and dog walkers because of its proximity to the town centre and residential areas. Walkers and cyclists can utilise the good connections from the site along the River Ver Trail or on the Alban Way to access the wider countryside. From the Alban Way to the west there are views of the Abbey Cathedral.

Allotment owners benefit from its long history of cultivation, fertile soils and accessible location.

Nearby sites include the Watercress Wildlife Association Local Nature Reserve and Local Wildlife Site on the opposite river bank to the allotments. The site is managed by local residents and volunteers and is open all year round, with a nature trail, boardwalk, wet woodland, old orchard, meadows and a wealth of wildlife to explore.

South of Sopwell Mill Open Space is Sopwell Meadows Local Wildlife Site, alluvial pastures with spring sources along the valley of the River Ver supporting areas of dry semi-improved neutral grassland, species-rich unimproved wet marshy grassland, swamp and fen, and areas of open water.

2.2.2 Conservation Designations

Sopwell Nunnery is subject to statutory and non-statutory designations. See Table 1 and the constraints map.

 Table 1 – Statutory and non-statutory designations

Scale	Designation	Detail
National	Scheduled Monument (SM)	Sopwell Nunnery Green Space is a Scheduled Monument (SM) which means the site has national significance and is protected under statute.
	Listed Building Grade II	Sopwell Nunnery ruins is a listed building (entry number 1103135) due to its historic interest and is protected under statute.
	Heritage at Risk	The Benedictine Priory of St Mary (Sopwell Priory) and the post-medieval mansions known as Sopwell House or Lee Hall (entry number 1019137) are registered as Heritage at Risk by Historic England owing to their current poor condition.
District / Borough	Conservation Area	Sopwell Nunnery Green Space falls within the Conservation Area for St Albans, a designation which seeks to preserve the character or appearance of a particularly valuable area. This covers all aspects of the landscape, including trees. Therefore, if any tree works are to take place within the site, a request must be made to the planning authority, who will decide whether the works can commence or whether to issue a Tree Preservation Order.
	Metropolitan Green Belt	Both Sopwell Nunnery Green Space and Sopwell Mill Open Space fall within the Metropolitan Green Belt, designated under PPG2 (Green Belts), which restricts the growth of development in strategic rural areas on the edge of conurbations.

The Environment Agency has included all of the Sopwell Nunnery Green Space and the river past Sopwell Mill Open Space in Flood Zone 3 which means consent will be required for any works which may have an impact on the risk of flooding.

2.3 History and Archaeology

Sopwell Nunnery is a well-defined and well documented archaeological site which has been left relatively undisturbed. The monument belonged to the Church in the first instance, before being taken over by one of the Henry VIII's most important advisers. The site's archaeology illustrates the great social and political changes that were occurring in the sixteenth century. The Nunnery has a national significance and has been designated as a Scheduled Monument. It is worth noting that, although the visible ruins are commonly referred to as 'Sopwell Nunnery', they actually represent the remains of a Tudor Hall built by Richard Lee.

Geoffrey de Gorham, the Abbot of St Albans, founded a Priory here around 1140, for Benedictine nuns dependent on St Albans Abbey. There were only five nuns and a prioress present at the time of the Dissolution of the Monasteries. The remains of the nunnery still lie beneath the present ruins.

Richard Lee was born in 1513, and his official connections began when he was appointed bailiff and farmer of the Priory around 1534. In 1535, Lee was employed as 'visitor' of the monasteries, and in the next year served with the King's armies as Surveyor of Works in Calais. As a close adviser to Henry VIII, he was in a position to exploit the Dissolution of the Monasteries. By 1540 he had acquired the stone of the priory church and its vestry, paying the Crown £13 6s for full ownership of the building and its property, plus an annual rental of 10s 10d. In 1549, he began altering Sopwell and calling his new house 'Lee Hall'.

The remains of Richard Lee's Tudor Hall seen from the west.

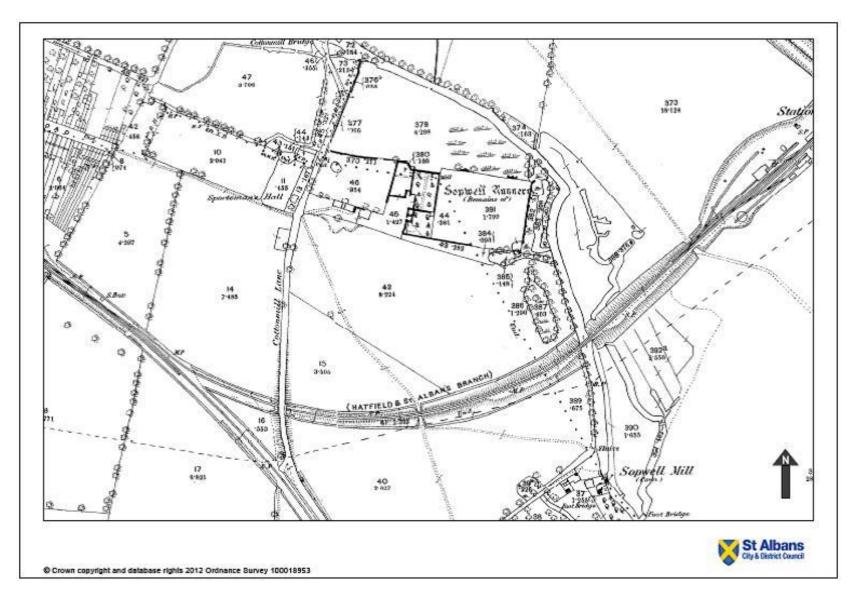

Richard Lee's will in 1570 includes mention of 'Lee Hall'; and on his death in 1575, the property passed to his eldest daughter Mary Coningsby, later married as Pemberton. Her sister and nephew, Anne and Richard Sadleir inherited in 1610 when she died childless. Thomas Saunders married Helen Sadleir, a descendant of Anne and Richard, and sold the property to Sir Harbottle Grimston. An estate plan of around 1650 shows the frontage of the house on its north aspect, probably in its last major incarnation.

Only the ruins of one wing and parts of the Great Hall now survive. In 1673 building material was removed from the site for re-use at Gorhambury, and eventually by 1682 it was said that 'Here was a great house but of late taken down and sold'. However, something of the building still survived, as payment was made to a glazier in 1698 for maintenance work at Sopwell. These tenements endured into the early eighteenth century when a lease of a great garden, 'now ploughed', and garden house was made to a William Kilby, gardener. Representations of the building in the eighteenth and nineteenth century show a ruin (see picture below) but there are indications of limited habitation as late as 1793. Indeed, one outbuilding was in use until the 1960s as a motorcycle repair shop and scrap metal merchant.

The ruins are currently on the Heritage at Risk register and a final consolidation phase needs to be programmed to remove it from the register. Management of the ruins is consented by Historic England. A major programme of repair works has been carried out including removing encroaching vegetation and vegetation that is growing out of the ruins, repairing brickwork using approved processes and clearing vegetation from in front of the ruins to maintain the views. Management of vegetation on and around the ruins is ongoing to prevent damage recurring. There have been problems with graffiti and vandalism with bricks removed from the walls and people climbing on the ruins.

Sopwell Ruins by Mr John Day 1850.

Map of the site circa 1880.

2.4 Habitats and Wildlife

Sopwell Nunnery Green Space has a significant role to play in the Ver Valley's wider landscape and as a wildlife corridor. Adjacent sites like the Sopwell Mill Open Space, the Cottonmill Lane Allotments, the Watercress Wildlife Association Local Nature Reserve, the Alban Way and the Marlborough Club provide connectivity and additional habitat space for wildlife. Although the Sopwell Nunnery site is relatively small, it hosts a wide range of habitats and species.

2.4.1 Grassland

Across the sites there are two large sections of amenity grass that are cut regularly, to allow the public to use the open space for recreation purposes such informal ball games and picnics.

In the previous plan there were efforts made to restore areas of the grassland to wildflower meadow by relaxing the grass cutting regime and sowing wildflower seed. This was partially successful, with the species diversity increasing in the wildflower margin of the laid hedge in Sopwell Mill Open Space, providing an additional nectar source for invertebrates and food for small mammals. On both sites the longer grass allowed by the relaxed mowing regime provides a greater diversity of habitats for invertebrates, small mammals and birds. This plan will follow on from that and take a more targeted approach to creating wildflower grassland in some of the longer grassland areas.

A wet meadow was established to the north of the Nunnery 2 Allotments where the ground is seasonally wet. This has become dominated by competitive species but still supports some flowering species characteristic of wet grassland, the most noticeable being purple loosestrife (*Lythrum salicaria*).

2.4.2 Trees and Wet Woodland

Wet woodland or carr is an important, rare habitat featured as one of the Forestry Commission's Regional Targets and a priority habitat for the UK. Apart from the construction of the Ver Valley Trail boardwalk, this area remains largely unmanaged and the habitat is maintained through natural processes. The site has a range of old mature Willows (*Salix spp.*), some of which have been previously pollarded and some of which are heavily laden with Ivy (*Hedera helix*). Many of these trees are

likely to provide excellent habitats for species such as woodpeckers and bats. There are few young naturally regenerating trees. Trees on site are surveyed regularly and resultant works are prioritised based on risk to life and property.

A woven willow tunnel was constructed in the wet meadow area on the edge of the carr in 2012 by volunteers and was maintained by the volunteers for several years, however the management of this sculpture was prevented by COVID restrictions while they were in effect. The willow sculpture is now overgrown as a result and the meadow area is dominated by competitive species making it difficult to access. The wet woodland will be allowed to expand into this area as part of the River Ver project, providing additional flood water storage and expanding the size of this rare and valuable habitat.

There are a number of specimen trees throughout Sopwell Nunnery Green Space ranging from mature trees to more recent plantings. Individual mature trees are a valuable resource for many invertebrates, birds and bats.

2.4.3 Scrub and Hedgerows

There are areas of scrub which form clumps within the grasslands, allotments, and along the boundary of the site, especially on the embankment of the Alban Way. Scrub provides habitats for nesting birds and mammals in the transitional zone between open ground and woodland. Dense scrub forms an impenetrable boundary feature along the north and south sides of Sopwell Mill Open Space as well as providing valuable shelter for wildlife. To retain this density and to control its propensity to invade grassland habitats, the scrub is managed regularly on a rotational basis.

Ruderal vegetation including Bramble (*Rubus plicatus*) and Common Nettle (*Urtica dioica*) has developed on some of the old footprints of the ruins where tall scrub has been removed in the past.

2.4.4 Allotments

Allotments are highly valuable sites for urban wildlife when managed sympathetically, providing a dense mosaic of habitats and a variety of flowering plants. Cottonmill and Nunnery Allotment Association (CNAA) manage the site along with nearby Cottonmill and Sopwell Mill sites. The Allotment area is divided into two separate sections: Nunnery 1 and 2. The two sites are separated by a narrow corridor of mixed trees, shrubs and low lying vegetation. This corridor is already an important feeding and nesting site for small birds and is used for shelter by larger birds and mammals, such as Foxes (*Vulpes vulpes*) and Hedgehogs (*Erinaceus europaeus*). The majority of the allotment site comprises tenanted plots which are cultivated for growing vegetables, fruit, flowers and herbs. Some allotment holders also keep chickens. Many have sheds and greenhouses and recent initiatives from the allotment association have resulted in a proliferation of wildlife areas and ponds appearing on the plots. The boundaries of the allotments contain a wide variety of shrubs, trees and hedgerows which constitute another significant wildlife habitat.

Towards the south east of Nunnery 1 there is a small wooded area of established old trees. This area is known for bats and a breeding site for small birds. Both sites also have the potential to be used by Grass Snakes (*Natrix natrix*) and Slow Worms (*Anguis fragilis*). The Allotment Association plan to develop the area to further improve it as a suitable wildlife habitat and increase its biodiversity.

The area of land between the Nunnery 2 allotment site and Sadleir Road which contains a section of wall which once formed one of the buildings of Lee Hall and a range of trees and shrubs has been offered to CNAA by SADC to manage as a nature reserve area. This was previously fenced off from the ruins however the fence has broken. Though this area is difficult to access due to tall vegetation and logs placed across its width, it is vulnerable to antisocial behaviour and dumping of garden waste.

2.4.5 River Ver

The River Ver is a chalk river, which are internationally rare and a priority habitat in the UK. Chalk Rivers flow from underground aquifers and are in their natural state are typified by good water quality and steady water temperatures. Healthy chalk rivers are characterised by clear waters, gravel beds with patches of in channel vegetation and gently sloping banks supporting rich marginal vegetation. Most of Hertfordshire's chalk rivers are degraded, but at their best they would support species like Brown Trout (*Salmo trutta*), White-clawed Crayfish (*Austropotamobius pallipes*), and Water Vole (*Arvicola amphibius*) and plants such Water-crowfoot (*Ranunculus aquatilis*) and Water Starwort (*Callitriche stagnalis*). The Ver's

population of brown trout has diminished, non-native North American Signal Crayfish (*Pacifastacus leniusculus*) can be found along the river, and water voles have not been recorded at Sopwell Nunnery Green Space or Sopwell Mill Open Space for many years. However, some emergent and in-river vegetation persists and Water Crowfoot is doing well. Kingfishers (*Alcedo atthis*) and Grey Wagtails (*Motacilla cinerea*) are still seen regularly along this stretch of the river.

Well vegetated section of the river Ver.

The vegetated margins of the river can provide an important refuge and migration corridor for wildlife. They are cut in sections on a three year rotation so that at least two thirds of the margin remains intact at any time. In the past pre-planted coir rolls have been attached to unvegetated sections of the river bank to extend this habitat and reduce erosion. Dogs entering and exiting the river have worn deep grooves into the bank in places impacting the paths as well as the river habitat and the installation of dog steps has not had significant impact in reducing this.

Erosion around dog steps installed on the River Ver.

The Ver Valley Trail follows the River Ver from its source at Kensworth Lynch, north of Redbourn to Bricket Wood where it joins the River Colne and eventually finds its way to the River Thames at Staines.

2.4.6 Wildlife

Kingfishers are known to have bred along the banks of the River Ver in recent years. Mallard (*Anas platyrhynchos*), Coot (*Fulica atra*) and Moorhen (*Gallinula chloropus*) are found feeding and nesting along the river. While in the more scrubby and wooded areas you will see Blue Tit (*Cyanistes caeruleus*) and Great Tit (*Parus major*), you might also spot Bullfinch (*Pyrrhula pyrrhula*), Nuthatch (*Sitta europaea*), Treecreeper (*Certhia familiaris*) and family parties of Long-tailed Tits (*Aegithalos caudatus*). With the nearby lakes Little Egrets (*Egretta garzetta*) and Grey Herons (*Ardea cinerea*) are often seen flying over.

There are plenty of suitable habitats across the site for a wide range of invertebrates from the tiniest of insects such as Woodlouse (*Oniscus asellus*) and ants (*Formicidae*) to the more noticeable species that people recognise such as hoverflies (*Syrphidae*) and bees (*Anthophila*). The site supports 23 species of butterfly which are a favourite with many people and can be seen on a warm sunny summer's day feeding on the various nectar sources around the site. Red Admiral (*Vanessa atalanta*) and Peacock (*Aglais io*) can be found on bramble flowers while in the more

dappled shady areas you could spot a Speckled Wood (*Pararge aegeria*). In late spring visitors can expect to see damselflies and dragonflies hawking along the river for insects; an unmistakable one is the Banded Demoiselle damselfly (*Calopteryx splendens*).

With the varied habitats the site has potential for use by both Grass Snakes and Slow Worms, especially the allotment area where there are suitable nesting sites, food and water; they are protected under the Countryside and Wildlife Act 1981. Other species of interest that have been recorded in the vicinity include bats (*Chiroptera*) and small mammals.

2.5 Access, Facilities and Infrastructure

2.5.1 Access and Circulation

Sopwell Nunnery Green Space and Sopwell Mill Open Space can be accessed by road, foot and public transport; it is seen as a valuable asset to the local community. Due to its proximity to the urban environment the site has a relatively high rate of usage by visitors to the ruins, walkers, dog walkers, families and children. The site is close to a local primary school, and the close mown areas in front of the ruins are frequently used for informal play.

The sites are accessible from the Alban Way - part of the National Cycleway Network (Route 61) – which divides the two sites with its surfaced off road path popular with cyclists and walkers. The Ver Valley Trail follows the River Ver through the sites.

Circulation within Sopwell Nunnery Green Space is facilitated by a surfaced path along the River Ver adjoining a boardwalk through the wet woodland and amenity grass allowing free access around the ruins and much of the grass areas. There are currently no surfaced paths within Sopwell Mill Open Space. The two sites are connected by a narrow and degraded path passing between the River Ver and the Nunnery 1 Allotments and under the Alban Way.

2.5.2 Site Entrances

There are entrances onto the public open spaces from:

- Cottonmill Lane at various points onto both sites
- Alban Way onto both sites
- Sadleir Road into Sopwell Mill Open Space (crossing the Alban Way)
- Monks Close into Sopwell Mill Open Space

Vehicle access onto Sopwell Nunnery Green Space is restricted by a ditch along Cottonmill Lane to the front of the ruins and logs at alternative access points to prevent risk of ground damage and fly tipping on the sites. The Council's Grounds Maintenance contractor is able to access the sites with vehicles via the allotments when required. Sopwell Mill Open Space has a lockable vehicle barrier to access the main grassland in the southern corner by the play area.

A wooden footbridge allows easy access from Cottonmill Lane across the ditch opposite the ruins. The northerly access point by the river from Cottonmill Lane is furnished with a ramp.

The allotments, which are only accessible to tenants, can be accessed by three pedestrian routes, or by car off Sadleir Road. Off-site parking is very restricted.

2.5.3 Furniture

Play Area

There is a small play area for younger children located in the southern corner of Sopwell Mill Open Space. The play area is popular and regularly used by families. Over time the play equipment will become worn and may require replacement; the play area is inspected regularly and repairs undertaken when required. Any new equipment would require external funding.

Benches

There are four benches on Sopwell Nunnery Green Space, three overlook the ruins. The fourth is installed by the river as part of the Ver Valley Trail depicting the rivers course and the natural and social history of the river. This has suffered some vandalism and, due to natural weathering, the carved illustration has become difficult to see. There are two benches on Sopwell Mill Open Space, one in the play area, the other viewing the recently laid hedgerow.

Ver Valley Trail bench following its installation in 2011 (left) and in 2023 (right).

Litter and Dog Waste Bins

The site is provided with both litter bins and dog waste bins, which are emptied regularly as part of the grounds maintenance contract. There are three litter bins and three dog waste bins on the Sopwell Nunnery side of the site, while Sopwell Mill Open Space has one litter bin in the play area and one dog waste bin further into the site. As bins near the end of their lives they will be replaced with bins which can take both litter and dog waste; at this point positioning of bins can be rationalised to reduce the number on site.

Footbridge, Steps and Ramp

The footbridge, steps (from the Alban Way) and ramp are checked regularly for safety and any issues should be dealt with immediately. There are three sets of dog steps into the river which are also regularly checked.

Boardwalk

A length of boardwalk runs through the wet woodland following the Ver Valley Trail and joins Sopwell Nunnery Green Space to Sopwell Mill Open Space. The boardwalk is named Fenny's Boardwalk after the man who looked after the stables that used to be opposite the ruins in Cottonmill Lane. The boardwalk is inspected regularly, items such as the weld mesh are replaced as required however this structure is approaching the end of its lifetime and is showing increasing amounts of wear and tear.

Fenny's Boardwalk takes the River Ver Trail through the wet woodland.

2.5.4 Interpretation

Welcome Signs and Notice boards

Welcome signs to orientate visitors are located at the three main entrances on Sopwell Nunnery Green Space; these are now looking a little dated and the southern entrance sign is often obscured by vegetation.

There are two notice boards for Sopwell Nunnery Green Space maintained by Sopwell Residents Association; one on Cottonmill Lane and the other at entrance to the allotments by the River Ver. These are becoming tired and difficult to view. There is a third notice board on Cottonmill Lane relating to the Revitalising the River Ver project. This is the most prominent of the notice boards on the site. There is also a notice board located in the allotments off Sadleir Road for use by allotment members. The main allotment access gate from Sadleir Road has a sign with the allotment name and contact details.

There are no entrance signs relating to Sopwell Mill Open Space.

Interpretation Panels

There are three interpretation panels around Sopwell Nunnery Green Space to inform visitors about the important natural features that are found on the site - wet

woodland, spring and summer wildflower meadows; and explain the management required to enhance those habitats. These are now look dated and are subject to graffiti.

There is a dedicated River Ver interpretation panel on the banks of the river near to the Alban Way Bridge just into Sopwell Mill Open Space; again like the benches this tells the story of the River Ver with intricate carved detail though due to natural wear and tear it is less visible than it originally was.

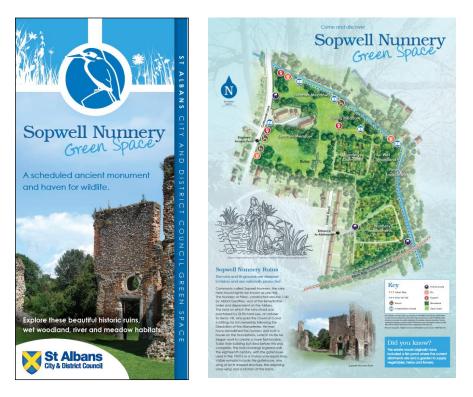

River Ver interpretation panel.

Website and other media

Sopwell Nunnery Green Space has its own web page on Parks Herts website at <u>www.parksherts.co.uk/parks/view/sopwell-nunnery-green-space</u>. There is also a page on the St Albans Museums website about the ruins at <u>www.stalbansmuseums.org.uk/visit/sopwell-ruins</u>.

A leaflet was produced for Sopwell Nunnery Green Space in 2011. It contains a map with information about the site's history and wildlife. The leaflet can be accessed via the Countryside Management service website at

<u>www.hertfordshire.gov.uk/services/recycling-waste-and-environment/countryside-</u> <u>management</u>, but is not currently promoted through the Parks Herts or museum service webpages or the district council website. The leaflet does not include Sopwell Mill Open Space.

Sopwell Nunnery Green Space leaflet.

2.5.5 Other Routes

There are several other walking and cycling routes that can be accessed from Sopwell Nunnery Green Space and Sopwell Mill Open Space.

The Ver Valley Trail follows the River Ver from its source at Kensworth Lynch, north of Redbourn to Bricket Wood where it joins the River Colne and eventually finds its way to the River Thames at Staines. It is a way marked linear route providing opportunities for longer, self-guided walks exploring the local countryside and the route is described in a leaflet. The route follows the north and east border of the Sopwell Nunnery Green Space and into Sopwell Mill Open Space on permissive access paths owned and managed by the council.

Two of the 8 Ver Valley circular walks; Ver Valley Walk 6 – The Two Cities Walk and Ver Valley Walk 7 – The Watermeadow Walk take in Sopwell Nunnery Green Space and Sopwell Mill Open Space. Leaflets are available on the Ver Valley Society's website <u>www.riverver.co.uk/walks/</u>.

One of the Abbey Flyer walks - The River Ver guides people from St Albans Abbey Station along the River Ver through Sopwell Nunnery Green Space and Sopwell Mill Open Space to Park Street Station. A leaflet for this walk is also currently available from the Ver Valley Society's walks page.

The western end of the Alban Way divides the two sites. This multi-user active travel route was formerly the old Hatfield to St Albans branch line. More information on this route can be found on the Council's website at <u>www.stalbans.gov.uk/walking-and-cycling</u> and on Sustrans website at <u>www.sustrans.org.uk/find-a-route-on-the-national-cycle-network/alban-way/</u>.

The Abbey Line Trail also passes through both sites on its route following the Abbey Line from St Albans Abbey Station to Watford Junction Station. A detailed route guide of this walk can be downloaded from the Abbey Line Community Rail Partnership website at <u>abbeylinecommunityrail.org.uk/days-out/abbey-trail/</u>.

Plans for a new country park to the south of Sopwell Mill Open Space have been proposed as part of the mitigation for a new Strategic Rail Freight Interchange (SRFI). With its north entrance adjacent to the south entrance of Sopwell Mill Open Space, the country park will allow visitors the opportunity to extend their journey along the riverside through a near continuous stretch of green spaces. The proposed multi-user route, which will facilitate walking, cycling and horse riding, crosses the Ver Valley Trail near the junction of Cottonmill Lane and Butterfield Lane and again just where both routes pass under the A414. From there the network of new and existing paths will allow walkers, cyclists and horse riders to reach Smug Oak Lane, south of the M25, and London Colney. The Rights of Way improvements planned in this project are unlikely to be completed in their entirety within the lifespan of this GAP, but it is possible that work on the area neighbouring Sopwell Mill Open Space will begin towards the end of this 5 year period.

2.6 Community and Events

The Council works closely with the local press to promote parks and green spaces especially by organising community days. Sopwell Nunnery Green Space has received well-earned recognition for being an important open space in the District and one which is well used by the local community. It has received the Green Flag Award in previous years, however SADC will not be applying to renew Green Flag status for Sopwell Nunnery Green Space.

2.6.1 Stakeholder Organisations

Due to its historical interest and value to residents as a local green space and the ecological importance of the river as habitat corridor, Sopwell Nunnery has a diverse range of stakeholder organisations who play role in guiding the management of the site.

Sopwell Residents Association (SRA)

The SRA work for, and represent, the residents of the Sopwell ward, to uphold equal opportunities and work for good relations amongst members of the Sopwell community. They promote an ongoing process of consultation between users and providers of organisations. They organise social activities which are open to all members. They also help create a safer community, create a better sense of community and work to improve the environment.

In 2011 the SRA published 'Sopwell, a history and collection of memories'. Details of the book and how to obtain a copy are to be found on the SRA website <u>sopwell.org.uk</u>. Any profits made from sales are used for community projects.

Cottonmill and Nunnery Allotment Association (CNAA)

The CNAA are a voluntary organisation, representing plot holders on Cottonmill, Sopwell Mill or Nunnery sites. Formed in 1994, they are one of the largest allotment associations in the St. Albans area, with over 105 active members.

The association works closely with its members and the council to maintain and improve amenities on the allotments. They especially aim to provide a strong and united voice in their dealings with the council. They offer a range of benefits to their members and organise a wide variety of social activities. They publish a regular own newsletter and have a dedicated website <u>www.stalbansallotments.co.uk</u> which is linked to from the Council's allotment web page.

The Council has updated the allotment rules and tenancy conditions to cover issues such as the use of chemicals, pets, anti-social behaviour, disputes between tenants and measures to deal with waiting lists. John O'Conner Ltd supply the allotments with rotted compost from vegetation collected from across the district, every other year.

St Albans Museum Service

St. Albans Museum Service oversees the protection and maintenance of the Scheduled Monument, continues to develop the understanding of the site and works to provide information about its history <u>www.stalbansmuseums.org.uk/sopwell-nunery</u>.

Every two or three years the service oversees the removal of vegetation from the remains of the Tudor Hall by a private company.

St Albans and Hertfordshire Architectural and Archaeological Society (SAHAAS)

SAHAAS, popularly known as the 'Arc and Arc', seek to promote public interest in, and improve public knowledge of, the architecture, archaeology and history of St Albans and Hertfordshire. The society has contributed to the preservation of several of the St Alban's key historic features as well as documents and objects of historical interest.

To these ends SAHAAS organises lectures, visits and exhibitions, maintains its own extensive library of primary and secondary resources, conducts and publishes research into the history and archaeology of the local area, and works in partnership with a wide range of organisations to achieve common goals. *Countryside Management Service (CMS)*

CMS works with the Council to enhance, care for and promote enjoyment and awareness of the countryside. They advise and, when able, give practical assistance to local authorities and conservation groups on how best to care for sites, including the commission and implementation of management plans

www.hertfordshire.gov.uk/cms.

CMS play an active role in encouraging volunteers and local residents to identify and become actively involved in projects on their local green spaces. CMS's practical volunteers work towards implementing the GAP. Extending works to include Sopwell Mill Open Space and potentially other local sites will make sure that any one site does not get 'gardened' and provide opportunities for people to get involved with lots of different tasks.

CMS also provide opportunities for informal recreation through events, guided walks www.hertfordshire.gov.uk/walksandmore and run Hertfordshire health walks at local sites <u>www.hertfordshire.gov.uk/healthwalks</u>.

Watercress Wildlife Association (WWA)

Volunteers of the Watercress Wildlife Association (WWA) along with local residents manage for the adjacent Watercress Wildlife Association Local Nature Reserve (LNR). The LNR, on the opposite bank of the River Ver to the Nunnery Allotments, consists of old watercress beds, nature trail, boardwalk, wet woodland, old orchard, meadows and a wealth of wildlife. The association has a consultative role on the steering group.

Ver Valley Society (VVS)

Ver Valley Society (VVS) have been integral to the development of the Ver Valley Trail which joins the green space to the wider countryside <u>www.riverver.co.uk/</u>. They organise volunteer tasks on this stretch of the river and are part of a wider Riverfly monitoring programme in the area, with a monitoring site at Sopwell.

Other stakeholders who receive minutes from steering group meetings include St. Peter's Primary School.

2.6.2 Events

Until recently the SRA held guided walks starting at Sopwell Nunnery Greenspace which were well attended. The Countryside Ranger for the area also ran guided walks for schools in the past. Unfortunately no events have resumed since they were stopped in 2020.

St Albans City and District Council promote Love Parks Week, a nationwide celebration of local greenspaces and the people who look after them, which begins

on the last weekend of July each year. The annual campaign encourages the public to explore parks and other greenspaces and enjoy all the facilities and heritage they have to offer.

2.6.3 Revitalising the River Ver Project

St Albans City and District Council is working in partnership with the Environment Agency to restore the River Ver between Verulamium Park and Sopwell Mill as well as the lakes within Verulamium Park. The aims of the project are to return the Ver to a more natural chalk river which is more resilient to climate change and better able to support iconic chalk stream biodiversity, and to restore the natural heritage of St Albans; creating more sustainable lakes and improved green spaces.

Because the scope of this project includes the section of the River Ver that runs through Sopwell Nunnery Green Space and Sopwell Mill Open Space, this GAP incorporates some actions which have been proposed as part of the River Ver Project to give a comprehensive overview of the management of these sites. The project will deliver habitat improvements to discrete reaches with this stretch of the river forming reaches 5 and 6. Work on these reaches will take place during phase 2 of the project.

The project is currently going through an extensive design and consultation process which will ensure it achieves the intended ecological impact and has the support of stakeholders. For more information on this project, please visit the district council website at <u>www.stalbans.gov.uk/revitalising-river-ver-project</u>.

3.0 AIM & OBJECTIVES

The aim and objectives of the GAP are as follows:

Aim

Sopwell Nunnery Green Space and Sopwell Mill Open Space are valuable greenspaces within a significantly built-up part of Hertfordshire, at the junction of two popular green travel routes and offering visitors an opportunity to enjoy the natural and cultural heritage of the area. The primary aims for management of the site are therefore to maintain and restore its natural habitats for the benefit of biodiversity, and to provide all visitors with welcoming and accessible spaces which highlight the heritage of the sites.

Objectives

- A. To maintain Sopwell Nunnery as a welcoming place, enhancing the experience of using the site for visitors
 - A1 Improve all site entrances to form welcoming, appealing gateways into the site.
 - A2 Ensure that visitors are able to successfully navigate to, from, and around the site.
 - A3 Provide a suitable network of accessible paths and transport routes throughout the site.
 - A4 Improve the accessibility of interpretation materials.

B. To ensure that visitors to Sopwell Nunnery feel safe and able to enjoy the site at all times

- B1 Carry out regular risk assessments of facilities, natural features and general environment.
- B2 Carry out reactive tree works to address safety issues.
- B3 Provide a proactive response to any misuse of the site.
- B4 Continue close liaison between SADC, stakeholder organisations, the local community and local landowners.

C. To ensure the standard of maintenance is upheld and relevant across the site

- C1 Manage and maintain the paths, signage and grass cutting by monitoring the grounds maintenance regimes.
- C2 Remove graffiti and fly tipping, and carry out regular litter picks and small scale vegetation management.
- C3 Ensure all structures are regularly maintained and fit for purpose.
- C4 Carry out regular inspections and any necessary repairs to the play area.
- C5 Report any pollution incidents to the Environment Agency.

D. To ensure sustainability of all management operations on site

- D1 Ensure ongoing maintenance costs are financially sustainable.
- D2 Secure external funding to ensure the viability of capital works.
- D3 Seek to minimise waste and reuse material within the site where possible.
- D4 Respond proactively to climate change.

E. To protect the nationally significant archaeological remains and historic landscape of Sopwell Nunnery Green Space

- E1 Ensure above ground historic features and buried archaeological remains are appropriately managed by developing a conservation management plan.
- E2 Undertake appropriate actions to ensure their preservation such that they are no longer at risk, including scrub removal and repairs.

F. To maintain and enhance the quality of the habitats across the sites, while maintaining their value for biodiversity and recreation

- F1 Continue the annual grassland management regime.
- F2 Create and actively manage wildflower grasslands on both sites.
- F3 Prevent encroachments of scrub into the grasslands.

- F4 Undertaking rotational coppicing of the boundary hedgerows and manage the laid hedge on Sopwell Mill Open Space.
- F5 Continue with active management of the river and river bank habitat in cooperation with the River Ver Project and the Local Nature Recovery Strategy.
- F6 Monitor and record species across the sites.

G. To enable local people and regular visitors to take an active role in the conservation, decision making and development of Sopwell Nunnery Green Space and Sopwell Mill Open Space

- G1 Support volunteer activity on site and ensure all involved operate towards achievement of the GAP.
- G2 Encourage the local community to become involved in the management of Sopwell Nunnery in a structured and supported way.
- G3 Organise and enable a range of events and activities across the sites.

H. To attract a wider variety of visitors to enjoy Sopwell Nunnery Green Space and Sopwell Mill Open Space and fully realise their value as an open space

- H1 Continue to develop events and activities with partners, key stakeholders and the community; raising awareness and interest in the sites.
- H2 Promote a greater awareness and interest in the sites through a variety of media notice boards, leaflet, interpretation panels, website.
- H3 Develop and promote the revised leaflet and interpretation panels to local schools and businesses and further afield.
- H4 Highlight the natural and cultural heritage of the sites and communicate this to visitors.

4.0 MANAGEMENT PRESCRIPTIONS

The management prescriptions described here form the basis of the actions proposed on the following action plan maps and tables (Section 5).

4.1 A welcoming place

Welcoming visitors to the site must start before they reach the site, when they are deciding whether or not to visit. This is because the majority of people looking for access information are much less likely to visit a destination if they can't find the information they need. Accessibility information on the ParksHerts and St Albans Museums webpages for Sopwell Nunnery is currently limited and could be improved. It acknowledges that the site is wheelchair and pushchair friendly and provides information on how to reach the site but is missing other information which would be useful for people with disabilities such as a description of the terrain, the location of the nearest public toilets, or what formats interpretation is provided in.

The district council do not currently have a webpage specifically for Sopwell Nunnery however it is listed as on their Commons and Greenspaces page so they could link to the Parks Herts webpage from there, making the information easier to find.

The entrances to Sopwell Nunnery Green Space and Sopwell Mill Open Space are relatively informal, with only a single defined path running through both sites. Such informal access is beneficial as the open view of the ruins from Cottonmill Lane does invite visitors onto the site however there is no entrance sign to Sopwell Nunnery at the north end of the surfaced path and the entrance signs and accompanying notice boards at other access points for Sopwell Nunnery Green Space are beginning to appear worn. The noticeboards frequently contain out of date notices and the entrance signs provide limited information beyond the location of points of interest and facilities within the site. The entrance signs are also entirely visual and use small text. As a result, the entrance signs in their current state could lead visitors to feel the site is not cared for and exclude people with visual impairments.

There are no entrance signs for Sopwell Mill Open Space at any of the entrances at present, the site being accessed via minor residential roads. The map on the entrance signs for Sopwell Nunnery Green Space also do not include this area so it is not as well signposted as it could be.

Following delivery of the River Ver project, after which the map will need to be updated, new entrance signage should be installed. This and all interpretation produced during the delivery of this GAP should be made accessible to a wider range of visitors by using appropriately sized font and making plain text versions adapted for use with text to speech software available online. Signage and interpretation will also continue to make use of illustrative elements to convey information e.g. maps with symbols identifying the locations of facilities. By improving the visual appeal and accessibility of the entrance signage the sites will be made more inviting. To ensure visitors can make the most of the many connecting routes off Sopwell Nunnery Green Space and Sopwell Mill Open Space new entrance signs should also consider what lies beyond the site. Highlighting on maps further walking routes, including the Ver Valley Trail and the new country park to south when it is completed, and directing visitors to points of interest outside the site as well as inside it.

The surface of the path has been identified as an issue hindering access, particularly between the two sites. Erosion around the dog steps has rendered the path unsuitable for use where it passes underneath the Alban Way bridge. The provision of a high quality path will only become more important considering the possible increase in the popularity of this route when the country park opens and extends the available riverside walk. Phase 2 of the River Ver project includes plans to replace sections of the path which will be moved back from the river bank to allow the bank to be regraded to a shallower slope. The new path will be a minimum of 2 metres wide and suitable for use in all weather. As this is a later stage of the River Ver project, some repairs to the path and fencing along the river bank, as well minor path modifications to the entrance at the north of Sopwell Nunnery Green Space to make it more user friendly for wheelchair and pushchair users, will be carried out prior to the River Ver project to ensure the path remains safe and welcoming for site users in the interim.

The boardwalk will be replaced as it is reaching the end of its lifetime. The new boardwalk should have a minimum width of 2m to allow site users to pass each other comfortably. The boardwalk may be extended during Phase 2 of the River Ver project as proposed enhancements to the river bank will reconnect a larger area of the site with the floodplain and facilitate expansion of the carr.

The proposed multi-user route being developed for the SRFI country park is likely to lead to a high number visitors seeking to join the Alban Way from the new route via Sopwell Mill Open Space, and perhaps also additional visitors following the Ver Valley Trail. To ensure the additional traffic does not lead to poor surface conditions and damage to the grassland habitat, a surfaced path linking the southern entrance and the Alban Way should be installed together with clear waymarking to onward routes indicating the permitted types of travel.

4.2 Healthy, safe and secure

St Albans City and District Council follow regular maintenance regimes for all of the public open spaces they manage. This includes inspection of the allotment fencing and the paths every six months, independent inspection and servicing of the play equipment annually as well as weekly internal inspections, and inspection of the trees on the site every 3 years, and addressing any issues identified by those inspections.

The site has been subject to occasional vandalism, primarily on the interpretation materials. While the council endeavours to remove all graffiti from the site in a timely manner, occurrences of graffiti impact visitors' perceptions, potentially inviting further antisocial behaviour and making the site appear less safe. Given the open nature of the site, positive deterrents such as encouraging greater public presence on the site and ensuring the site looks well maintained are likely to be more effective in preventing graffiti at Sopwell Nunnery Green Space.

Due to its secluded nature, the area of land between the Nunnery 2 allotment site and Sadleir Road has been at risk of use for antisocial behaviour since the fence broke enabling access from the ruins. Tall vegetation, including bramble (*Rubus plicatus*), makes this area difficult though not impossible to reach at present and could be allowed to develop into a more substantial barrier.

There have been instances of people foraging in Sopwell Nunnery Green Space which is permitted under UK law, provided it is only for personal consumption and it does not damage rare or endangered species. However, it should be noted that potentially dangerous species are not removed from the site so site users are advised to exercise caution when picking any wild plant. In addition, foraging should be practiced with restraint, never clearing a species from the site, thereby allowing some specimens to reproduce and ensuring sufficient resources remain for wildlife.

Oak processionary moth (OPM) has not been found within Sopwell Nunnery Greenspace or Sopwell Mill Open Space to date, however St Albans City and District is within the Established zone for this invasive species, making it the responsibility of landowners to manage OPM on their land. If a potential OPM sighting is identified on site, either through the course of regular inspections, maintenance activities or reported to SADC by a third party or member of the public, appropriate will be undertaken based current best practice and the level of risk posed to public health.

4.3 Clean and well maintained

Day to day maintenance of Sopwell Nunnery Green Space and Sopwell Mill Open Space is carried out by John O'Conner as part of a wider grounds maintenance contract. This includes grass cutting and cutting back hedgerows as well as litter picking, and removal of graffiti when required. To ensure the visibility of the entrance signage at the south entrance to Sopwell Nunnery Green Space from the Alban Way, the adjacent hedgerow should be cut more regularly.

As previously mentioned, the path will be realigned and improved during the delivery of the River Ver project. The boardwalk will also be improved as it reaches the end of its lifetime and is replaced. To ensure public achieve the best value for money balancing sustainability, longevity of public assets, and aesthetic value, supports made of wood effect recycled plastic will be used to hold up the boardwalk going forward.

The fence at the top of the bank beside the path linking the two sites is dilapidated; it has been repaired in a couple of places and is now absent in others. The River Ver project aims to realign this path, which will allow the path to be made wider, and to regrade the bank. Until this takes place an interim solution is needed to ensure this path is safe and in an acceptable condition for site users. The path should be resurfaced and the fence should be replaced.

The entrance signage is anticipated to be replaced towards the end of this plan; the signage is beginning to look tired but it would be inefficient to replace these items before projects which will change the map are delivered. The existing interpretation

on the site is also in poor condition, being vandalised and tired. This again makes the site seem poorly cared for, inviting further anti-social behaviour on the grounds. To resolve this issue the Ver Valley Trail bench and the mount for the Ver Valley Trail interpretation will be restored. New interpretation relating to the history of the site, and to the habitats and wildlife will be installed in Sopwell Nunnery Greenspace. To add to the durability of new interpretation it will have a graffiti resistant coating. Installing more engaging interpretation may also improve the quality of site indirectly; facilitating learning about the natural and historic environment can encourage visitors to look after the site, as people are more likely to value what they understand and therefore they will be more motivated to protect it.

The River Ver is patrolled by dedicated volunteers from the Ver Valley Society on a monthly basis. They take measurements of the flow, record the state of the river and path, note vegetation and wildlife, and report any pollution, rubbish or fly-tipping. where necessary inform suitable authorities of problems. In addition to this, informal inspections are carried out by SADC and CMS officers. Members of the public are also able to report water pollution and other environmental incidents to the Environment Agency, please visit <u>www.gov.uk/report-an-environmental-incident</u> for more details.

4.4 Sustainability

In 2020 St Albans City and District Council published The Sustainability and Climate Crisis Strategy which describes the council's targets and intended actions to improve the district's environmental impact. This aligns with the Sustainable Hertfordshire Strategy produced by the county council in the same year and guides the management of all SADC properties and projects.

SADC are committed to managing their open spaces using environmentally sustainable means. They have implemented the following measures:

- composting green waste generated on site and supplying the well rotted material to the allotments once every two years
- adopting peat, herbicide and pesticide free grounds maintenance, except where there is net benefit to the environment (e.g. to prevent spread of invasive species).

The allotments are similarly managed to reduce any negative environmental impacts and there is growing support among tenants for environmentally friendly gardening.

To ensure management on site is sustainable, all works will be specified to ensure the best value for money is achieved with the funding available, balancing the ecological impact of the materials and supplier, the durability of the item, aesthetic value, and price. This means that sustainably sourced renewable materials are used for items which do not experience a significant amount of wear and tear or can have component parts replaced as and when required. For items which need to be more robust or cannot be replaced easily, metal (usually stainless steel) is most often used. Wood effect recycled plastic is used where having a more natural aesthetic is also important.

Sopwell Nunnery Green Space will also be included in a proactive response to climate change. Expanding the wet woodland and riparian habitats as part of the River Ver project will reconnect more land to the flood plain, creating additional flood storage as well as increasing the coverage of a rare habitat to the benefit of species which depend on it. The additional trees will also increase shade coverage which provides a refuge for biodiversity against the increased temperatures expected with climate change. Best practice management will be employed with regards to all habitat and vegetation works.

Furthermore, visitors will be encouraged to act more sustainably. By facilitating learning about the local ecosystem and its importance and how individuals can protect it, interpretation on site could be used to promote environmentally friendly behaviour. This may include behaviours such as:

- Reducing water consumption at home to reduce the amount of water abstracted from rivers thereby reducing the risk of rivers drying out during droughts,
- Not allowing dogs into watercourses for two days after flea and tick treatments to reduce the insecticides leaching into the water, and after heavy rainfall to prevent bank erosion and sediments clogging the gravel river bed, and
- Using reusable bottles and other containers to reduce waste.

To ensure the ongoing maintenance costs are financially sustainable, the council will maximise the use of existing resources and proposed works will be achieved within the available site maintenance budget, or funded through external sources such as existing or future Section 106 funding. Alternative funding sources will also be explored in the first year of delivery to facilitate other proposed actions.

4.5 Archaeology and landscape

The archaeological remains within Sopwell Nunnery Green Space are a remarkable historical asset that appears neglected and often misunderstood. They are currently on Historic England's Heritage at Risk Register, recorded as being in poor condition though a programme of repair works has been carried out. The final phase of this programme, which includes consolidation and putting a conservation plan in place to ensure the ruins will be well maintained going forward, has yet to be delivered.

The SM has the potential to contribute to the cultural offering of St Albans as a historic town. Therefore safeguarding the ruins against further damage and getting the ruins off the Heritage at Risk register is a priority action for the management of this site.

The St Albans Museums Service will finish development of a conservation management plan in the first year of this action plan. The conservation management plan will ensure above ground historic features and buried archaeological remains are appropriately managed, detailing appropriate actions to preserve these important features. This will include, as a minimum, removing vegetation from the ruins to prevent roots damaging the mortar and controlling vegetation on the footprints of former buildings to prevent damage to buried remains and maintain open views of the above ground features to maximise visitor experiences. Any additional actions identified in the conservation plan will be adopted into this GAP following the conservation management plan's completion.

The potential of this site as a place of interest is not currently realised largely due to the poor condition of and lack of appreciation for its heritage. Richard Lee's importance to national history is not well recognised, and the ruins of Lee Hall are often mistaken for the remains of Sopwell Nunnery. Installing new interpretation exploring the history of the site is essential in increasing the recognition of its significance. SAHAAS have begun preparations to produce two panels for the site; one on the building and one on Richard Lee.

There have been issues with visitors climbing on the ruins and defacing them in the past. Given that the ruins of Lee Hall and the buried archaeological remains are such a remarkable historical asset, access to the ruins should be maintained to allow visitors to connect with the cultural heritage this site represents. Installing interpretation is more likely to dissuade such behaviour, as people are more likely to value what they understand and therefore they will be more motivated to protect it.

The River Ver project is unlikely to impact the ruins in any way as the SM lies outside of the floodplain.

4.6 Habitats and biodiversity

Due to the historic nature of this site, to enhance the character of the site habitat improvements should reflect the historic land use, taking into consideration how the site is currently used by visitors. The habitat management prescribed by this plan will also need to foster climate resilience, so will need to facilitate the establishment of ecosystems which can withstand increasing extreme weather events.

The map produced around 1880 shown in section 2.6 depicts a mosaic of wet grassland, wet woodland and grassland. The wet woodland covered approximately the same area that it currently does but there was a larger area of wet grassland to the north of this.

The River Ver project includes plans to reconnect the area north of the Nunnery 2 Allotmentswith the flood plain of the river and allow it succeed to wet woodland, replacing an area of scrub and wet grassland. While there is no evidence available that this area was historically wet woodland, it is a rare habitat that supports many species which will be more resilient and able to support more wildlife on the site if it covers a larger area. It will also support the stability of the water level in the river by providing flood storage. This is likely to have minimal impact on visitors' experience of the history of the site as it will not obscure the historic north entrance to Lee Hall and is intended not to reduce access to either this entrance to the ruins or the adjacent allotments. Development of the River Ver project will include consultation with relevant bodies to ensure the historic environment is taken into consideration and protected appropriately.

The river bank habitat is currently managed through routine maintenance, with one third of the riparian vegetation being cut every year to encourage new growth and enable visitors to see the river. During the course of this GAP a number of habitat improvements for the river and its associated habitats will be delivered in cooperation with the River Ver Project. The proposed works include:

- The river bank will be reprofiled to narrow the channel and create a shallower slope, increasing the area connected to the flood plain on which riparian habitat can establish.
- Tree thinning will be undertaken in places along the river bank to allow more light to reach the water.
- Woody berms will be installed in the river channel using material from the tree thinning to introduce flow diversity.
- Pools will be created, to provide continuity of habitat during periods of low flow for species which require deeper water.
- Gravel will be added in places to create riffles, which again create flow diversity but are also a vital feature for fish spawning.

There have been issues with dogs eroding the river bank where they enter and exit the river and the installation of dog steps has had limited impact in reducing this. The actions which will be delivered through the River Ver project will help to address this, as shallower banks stabilised with vegetation will be less vulnerable to erosion.

The majority of the site will be maintained as amenity grassland. The grounds maintenance contract specifies that amenity grass be kept between 10cm and 20cm length while wildflower areas are cut once per year and cuttings removed off site. A new wet grassland wildflower area may be established in Sopwell Nunnery Green Space as part of the River Ver Project as groundwater levels recover making lower lying areas of the site wetter, this will also create suitable locations for the creation of a new willow scultpture using willow pruned from trees on site. Previously seeded areas expected to remain dry will be re-established as wildflower meadows through seeding with a more targeted species mix, and these and the existing wildflower areas will be cut once in autumn, leaving up to a tenth of the grass long over winter to provide shelter for invertebrates and enabling the three species of skipper butterfly to breed on the site. Long grass areas left each winter should be moved each year to prevent thatch developing in the sward and ensure scrub does not encroach onto the grassland. The wildflower area on the east side of Sopwell Mill Open space has become dominated by taller competitive species so the frequency of cutting should be increased to three times a year, in April, late July and October, to allow smaller species to grow.

The hedgerows and scrub along the boundaries of Sopwell Mill Open Space need to be managed to stop encroachment into the grassland and play area. The laid hedgerow across the site needs to be managed by continuing the schedule of laying and cutting regrowth. To create structural diversity and increase the length of edge habitat present small sections of the scrub bordering Sopwell Mill Open Space and the allotments could be coppiced every three years, rotating between sections to allow regrowth. Allowing narrow gaps in the scrub between sites would facilitate navigation of wildlife between SNGS, the allotments and SMOS while maintaining a distinct boundary around the allotments.

The Ver Valley Society regularly record wildlife seen by volunteers, including standardised ecological surveys for freshwater invertebrates on behalf of the Riverfly Partnership. Members of the public could also be encouraged to contribute to citizen science efforts using apps such as iRecord, which enable the compilation of species datasets used to inform conservation work and research.

4.7 Community involvement

A period of public engagement accompanies the production of this management plan, enabling the local community and stakeholders to inform management of the site. All user groups with an interest in the site are aimed to be included in this process, and for their requirements to be considered as part of the planning process. Liaison with stakeholders will continue throughout the delivery of this GAP to ensure it remains relevant and actions are delivered as planned. The action plans will be reviewed and updated annually in response to feedback and information from stakeholders. Means for members of the public to provide feedback about the site should be easily accessible via the council website and promoted on the site noticeboards.

Ver Valley Society and CMS conservation volunteers will deliver tasks on site, and opportunities to engage with these groups will be promoted to encourage local residents to become actively involved in site management. Volunteering is a tried and tested way of increasing interest and care for a site, whilst providing participants with the benefits of healthy activity, socialisation and environmental projects. To maximise the opportunities for volunteering a new woven willow structure should be created and maintained, as the previous one was, by volunteers; maintenance involves either weaving in or pruning off the new growth and weeding around the base of the structure to stop bramble and ivy from taking hold.

Guided walks, talks and other events can likewise engage members of the community and cultivate interest in the sites and their maintenance. There is great potential for using both sites to host a range of events and activities, both those relating to the ecology and history of the site, and community events, by working with residents, special interest groups and schools to run events. St Albans City and District Council will continue to support Love Parks Week, highlighting the features of interest within Sopwell Nunnery as well as other sites and encouraging residents and visitors to explore the site.

4.8 Marketing and communication

The remains of Lee Hall are a remarkable historical asset that appears neglected and often misunderstood. Sopwell Nunnery Green Space has the potential to contribute to the St Albans' cultural offer and add to its appeal as a historic town. Using engaging and accessible interpretation and events to communicate the heritage would bring a range of rewards both in terms of understanding and attraction.

To that end new interpretation panels highlighting the history and wildlife of the sites will be installed and a new leaflet will be developed. The leaflet could be made available in a physical format at St Albans visitor information points, however it is anticipated that it will be primarily accessed digitally, either to view digitally or for home printing, so it should be promoted on all webpages relating to Sopwell Nunnery. Improving the available interpretation will also enhance the value of

Sopwell Nunnery Green Space as an educational resource and a venue for events, enabling schools and local organisations to benefit more from it. Links with such organisations should be developed to ensure this potential is met.

Volunteer activities and guided walks around Sopwell Nunnery and the surrounding area have been well received, offering a more direct and personal opportunity to engage with the heritage of the site, therefore these will continue. Furthermore the walks and talks with the Countryside Ranger which were run for school groups could be offered to special interest groups as well. The two public open spaces have been used for community events in the past, however these did not relate to the heritage of the site. The ruins could serve as a backdrop for plays and living history events linking to the Tudor history of St Albans, increasing their value as a community asset.

The noticeboards, which will be replaced at the end of their lifetime, should be used to promote events on the sites with content reviewed monthly to ensure they remain up to date. The SADC website could also be used to promote the Sopwell Nunnery Green Space and Sopwell Mill Open space as venues for community events.

5.0 ACTION PLANS AND MAPS

The following action plans include ongoing management for which budget has been allocated and prospective actions which are subject to funding being secured. Actions proposed as part of the Revitalising the River Ver project have been here, these are subject to funding being secured and it is undecided whether these will be delivered within the timeframe of this GAP.

5.1	Annual Actions	Ongoing management		nent	Prospective actions				
Ref no.	Action	Obj. Ref	When	Lead	Delivery	Funding Stream	Est. Cost	Spec . ref:	Status
0.1	Health and Safety inspections and undertaking of works.	B1	When required	SADC	SADC	GM Budget	Contract rates	n/a	
0.2	Empty bins on a weekly basis.	C2	All year	SADC	SADC	GM Budget	Contract rates	n/a	
0.3	Replace old dog bins with litter bins unless another litter bin is in the same area.	СЗ	When required	SADC	SADC (JOC)	GM Budget	Contract rates	n/a	
0.4	Undertake a tree safety survey every 3 years and carry out emergency tree work.	B2	Sep- Feb	SADC	SADC	Tree Budget	Staff time	n/a

*Action is subject to delivery of the Revitalising the River Ver Project.

6.0 SPECIFICATIONS

1.	General prescriptions relevant to all works
	Members of the public to be kept a safe distance from works with signs and or banks men. Access routes may require temporary closure.
Public safety	Contractors shall be responsible for safeguarding all materials and plant on site and shall ensure that all such materials and plant in no way or at any time, represent a danger or risk to the general public or authorised persons.
	Work will be left safe at the end of the day and any hazards will be protected to prevent public access.
	Any and all damage caused by the Contractor to land property or any other permanent features shall be required to be made good by the contractor at their own cost.
Damage	All works around the Scheduled Monument to be carried out sensitively, and with a watching brief if deemed appropriate, to avoid damaging the monument.
Timing	Unless otherwise stated, all habitat management work will be undertaken between 1st September and 28th February.
Timing	All work will aim to be undertaken outside of wettest winter months to minimise damage to soils and tracks.
	Machines and vehicles should not be left to idle and should be turned off to reduce air pollution and noise.
Vehicles and equipment	Contractors should ensure that all equipment/plant/vehicles entering the work site be clean of all soil and plant material that may have accumulated from work on other sites. This is in order to prevent invasive plant species or other contaminant from being introduced to the site.
	All refuelling, including chainsaw, is to take place on a specifically designed spill containment device, away from watercourses with fuel spillage kits on site at all times.
Waste disposal	All spoil and cut material should be removed from site and disposed of responsibly and in accordance with current waste legislation, and the site be left tidy.

2.	River works
	Prior to visiting the site and commencing works contractors and volunteers must follow the Check-Clean-Dry protocol for all plant and equipment to avoid spreading of invasive non-native species (INNS).
	Any INNS identified on site should be disposed of responsibly to prevent it spreading on site or downstream. Cut vegetation of any sort must not be left on the river bank or in the river channel. It should be disposed of responsibly off site, with temporary storage at least 5m from the top of the bank.
Details	To mitigate against the displacement of sediment from activities in channel a silt curtain will be established downstream of the working areas extending the full width of the channel. Inspection and clearance of accumulated materials against the silt curtain will be carried out on a daily basis. The silt curtain will remain in place for 48 hours after completion of the works.
	Any re-fueling of plant is to be carried out at the start of each working day in a compound away from the water's edge. Spill kits will be available at all times on mechanical plant. Oil booms will be positioned across river channels.
	In the event of a pollution incident, the Environment Agency pollution incident hotline will be contacted on 0800 80 70 60
	Material from within the site should be used for the creation of wood debris structures where possible.
Timing	In channel works should be undertaken in autumn, to avoid worst weather conditions while minimising the impact on wildlife by avoiding spawning and nesting seasons.
Timing	Marginal and bank vegetation should be cut on rotation every two- three years in late autumn or early spring to minimise the impact on wildlife

3.	Tree thinning
	Any thinning works will further the aim of reducing coverage of non-native species (e.g. sycamore) and encouraging natural growth/ regeneration of native species.
	Arisings to be disposed of appropriately through small amounts of deadwood stacking or removal off-site.
	Opportunities for deadwood creation should be realised through thinning works.
Details	Halo-thinning around crowded 'feature' trees will provide improved environmental conditions. Halo to be no larger in radius than half- height of feature tree.
	This site has the potential to support nesting birds and bats. Works to trees, scrub and hedges should be conducted outside of the breeding season. A survey of potential roosts should be carried out prior to the commencement of works. Should the contractor come across any evidence of bats (or any other protected species) then they should stop work immediately.
Timin	Thinning requiring mechanised techniques and/ or vehicles to be undertaken in autumn, to avoid worst weather conditions.
Timing	Lighter thins involving volunteers can be undertaken at any stage between September and February.

4.	Wildflower seeding and management
Details	Provenance of wildflower and grass seed should be from the UK to avoid introducing invasive species. The seed mix must be suitable for the location being seeded i.e. Emorsgate Seeds EM2 in areas which do not experience waterlogging, Emorsgate Seeds EM8 – Meadow Mixture for Wetlands in seasonally wet areas.
	Ground must be scarified and soil loosened to create suitable surface for sowing. Native wildflower (and grass) seed should be surface sown thinly at approximately 4gms of seed per square metre. Damp sand can be mixed with the seed to act as a carrier and identify where seeds have been spread. If the species mix does not contain yellow rattle, which is hemi-parasitic on grasses, yellow rattle seed will be hand sown into the grassland which should reduce the abundance of grasses and promote the establishment of wildflowers. Firm in with a roll, or by treading, to give good soil-seed contact.
	In the first year of establishment, newly sown meadows should be mown regularly from mid summer to a height of 40-60mm to control annual weeds and help maintain balance between faster growing grasses and slower developing wild flowers.
	In the second and subsequent years leave plants from spring through to mid summer to flower. After flowering in July or August take a 'hay cut' can be made to c 50mm. Leave the 'hay' to dry and shed seed for 1-7 days then remove from site. This can be followed with autumn and early spring mowing to 50mm depending on growth rate. In exceptionally hot and dry summers, the hay cut can be carried out earlier in July to manage fire risk.
	For existing hedgerow wildflower margins, areas within 2m of the hedge or woodland boundary can be left uncut in most years, cutting on rotation every 2-3 years. Areas that are further from the margin and more open can be managed as grassland habitat.
	Hedgerow vegetation that is not mown or grazed each year will become rough and "tussocky" in character over time, this can form a useful refuge habitat. If it develops into scrub or bramble it should only be cut between October and February.
Timing	For best establishment, wildflower seeding should be undertaken in the autumn, ideally October, before the first frost.

Cutting should take place in early spring, late summer and
autumn.

5.	Path Surfacing
Details	Remove organic debris from the existing path and break up top layer. All soft spots to be excavated back to firm ground with the to a minimum depth of 100mm and safe width of the surfaced area should be a minimum of 2 metres where possible.
	Most of the main path already has a base layer but where no firm base layer already exists lay a water permeable non-woven geotextile to maintain separation of the base layer and sub-base.
	Supply, spread, grade and thoroughly compact a dense, tight, even base course of virgin granite 50 mm to dust, to a minimum finished depth of not less than 75mm.
	Supply, spread, grade and thoroughly compact to a dense, tight, even surface, a layer of well graded concrete dust fines 6 mm to dust as surface dressing.
	Finished, compacted depth to be not less than 25 mm. Base course to be completely covered.
	Path to have a final maximum 1:40 (2.5%) cross fall or minimum camber of 1:50 (2%) to allow surface water to drain either side.
	Edging/revetment may be required along part of the path's length.
	Material must be completely free from deleterious materials and any protruding objects to be removed by the contractor.
Timing	Installation will aim to be undertaken outside of wettest winter months to minimise damage to soils and tracks.

6.	Interpretation
Details	Design to follow the SADC house style and incorporate illustrative elements to convey important information and key features of interest.
	Plain text version with alternative text for images to be produced for publication online.
	Lectern frame with wood effect recycled plastic surround and twin leg, incorporating a graffiti, scratch and flame resistant GRP panel displayed at a suitable height and angle to be easily visible to children and wheelchair users as well as the general adult public.
Timing	Installation will aim to be undertaken outside of wettest winter months to minimise damage to soils and tracks.

7.0 APPENDICES
